

New Ways to Manage Your BO XI Security and Backups

The problems with BOE XI security management

- CMC usage can be **time consuming** and managing security is not easy in XI
- The CMC (R2 and 3.x) offers **less flexibility** and **less visibility** of your security configuration.
- The Security Viewer provides **only a “User centric”** vision and does not allow implementation or changes.
- Proper documentation is a **very manual** process filling out external spreadsheets to display a security matrix of inheritance groups and subgroups as well as inheritance folders and subfolders

Who has access to which folders / reports in the Finance Department?

The problems with BOE XI Backups

- Import Wizard provides a **manual** method to create BIAR file backups.
- Command line scheduling of BIAR files is **not integrated** with internal scheduler.
- In order to backup changes made to the environment, you must backup the **entire environment**.
- A disaster recovery plan **requires synchronized backup** of the file store and the security database for full restore.

Securely backup your entire BOE platform

- Schedule the FULL backup of your SAP BOE platform (documents, universes, groups, security, users + all objects).
- Keep several versions of the backup content (only modified content is backup).
- Non intrusive and web based solution. No matter how big your SAP BusinessObjects deployment is.

Schedule backup of a universe and associated reports

Selective restore of your SAP BOE platform content

- Restore of any version is just a mouse click away.
- Restore even lost content (like a personal user document deleted by mistake) using our unique Recycle Bin feature.
- Undo administration tasks done by mistake only by restoring previous version of content.

Restore of a single report
